

# Dedicated to Controlled Environment Contamination Prevention Products

Teknipure is the premier developer, manufacturer, distributor of innovative cleanroom and other controlled environments consumable contamination solutions. Our products are designed to prevent, control, and remove contamination effectively and efficiently.

We carry a complete line of products, including the following wipers and mops:

## Wipers

### TekniGamma Sterile Wipers

TekniGamma sterile wipers provide excellent critical cleaning performance in sterile clean environments, ranging from aseptic processing and filling to compounding pharmacy needs.

### TekniClean Wipers

TekniClean wipers are made from start to finish with the most demanding specifications and results in mind. Teknipure utilizes advanced production and cleaning technologies; investing in purity thru innovative technology. We manufacture three grades of product purity (TC3, TC2, TC1) which include the most critical micro-contamination control needs to general lint-free surface cleaning and wrapping.

### Teknipure Microfiber Wipers

Teknipure Microfiber Wipers provide best ability to capture and hold ("pick-up") contamination in critical cleaning applications which require pristine surfaces, and where scrap is not an option. Our unique wedge like yarn structure effectively traps all micro-contamination.

### TekniZorb Microfiber Wipers

TekniZorb microfiber wipers provide best ability to capture and hold ("pick-up") contamination in critical cleaning applications which require pristine surfaces. TekniZorb microfiber removes contaminants and bio-burdens, polishes, restores surfaces, and retains all fiber; no costly shedding. We offer a family of microfiber fabrics which provide best Intrinsic & Extrinsic performance to tackle your most difficult surface cleaning applications.

### TekniZorb Non-Woven Wipers

TekniZorb non-woven wipes provide an ideal solution for many general to critical cleaning applications in controlled environments. Non-woven wipers have unique characteristics which provide economical and effective cleaning results. Available in various weights, cut sizes, rolls, dry, or pre-saturated. Non-woven wipes are made with hydro-entangled fibers, providing a pure and strong bonding. These fabrics provide high absorbency, solvent compatibility and wiping efficiency.

### TekniSat Wipers

Wipers perform best when lightly saturated with an appropriate cleaning fluid which "attracts" contaminants and eliminates static. Saturating wipers by end-users, on site with gloves, may lead to inconsistent results and over-saturation deposits, as opposed to attracting contamination.

## Mops

### TekniMop CR

TekniMop is the best choice for cleaning of floors, walls, and ceilings of clean rooms. Best performance is provided by combining the "pick-up" of microfiber, absorbency of foam, & strength of polyester. Lightweight, ergonomic and easy to use on all surfaces; best performance at economical costs. Microfiber Cleaning Surface / Polyester Support. Surface cleaning (smooth or textured) floors, walls, ceilings, hoods.

### TekniMop CE

TekniMop CE is an excellent choice for cleaning of floors, and walls in controlled environments. Its best performance is provided by combining the "pick-up" of microfiber, absorbency of foam, and strength of polyester. This product is also available as Sterile for Aseptic processing applications.

## TekniSwab

The TekniSwab family of products are intended for critical cleaning applications of various degree. All are manufactured and tested to meet stringent specifications, cleanroom laundered and come with double-layered, high-strength, and high solvent capacity heads. The TekniSwabs are Class 10/ISO 4 laundered and they are free of organic contaminants. Available with many head configurations and materials (foam, polyester, microfiber) and ESD handles.
